

The Enhops Team

has adopted Perfecto tool to automate modified UI & automated 109 test cases & 23 business use cases

A US and Canada based leading **organic food seller** caters wide range of products including nutritional supplements, personal care items etc. As part of their value-added services, they also provide proprietary technology, data, market insights, and shelf management to help users build their businesses.

They chose **Enhops** to automate new UI designs. Our automation experts implemented Perfecto tool and automated the UI design.

Tools Used

4-key areas of concern

The initial assessment of the Client's existing business software revealed a few challenges:

- The client's login process is taking longer time, and scripts are failing due to application latency
- Tight timelines
- Understanding the Perfecto tool
- Lack of business/domain experts to give KT

Enhops' Solutions

5-Key Solutions

Client's login process is simplified and reduced the time to log in. We have implemented a script to work on all browsers and mobile applications.

Our proposed solutions were:

- Understood the Perfecto tool, application architecture, business needs, user scenarios, logical data flow, and new UI design
- Deployed business/domain experts and published UAT test strategy
- Involved in end-to-end UAT testing, including functional and cross-browser testing using Jira (test management tool)
- Execution on multiple browsers and cloud devices
- Integrated the automation suite with Jenkins to enable continuous automation, centralized execution, and reporting

Results

3-Key Outcomes

We automated functional testing of web applications on QA and UAT environments.

- Enhops (business/domain experts) performed UAT testing for application features which helped the client to achieve quick time to market
- Automated 109 test cases, and regression cycle time was reduced
- Automated 23 business use cases with the latest UI changes

About Enhops

Enhops works at the forefront of Quality Engineering and Software Product Engineering solutions to suit the most unique business needs. Enhops was established in 2015 with a vision of driving Digital Disruption across industries through **Quality-Engineering, Automation-First, and Smart Testing**. Our philosophy has always been to partner with our clients in their Digital Transformation journey.

Blending Enhops' Quality Engineering capabilities and ProArch's two decades of expertise in Software Product Engineering, we are a true partner who delivers value-based outcomes.
